The Lamellæ of the New Pharmacopœia

CAN BE OBTAINED IN BULK AND IN TUBES OF

SAVORY & MOORE,

THE ORIGINAL MAKERS OF

Ophthalmic & Hypodermic Discs, & other Medicated Gelatine Preparations,

And whose Discs were taken as the Standard by the Pharmacopœia Authorities.

The following Extract from the "BRITISH MEDICAL JOURNAL," of Feb. 6th, 1886, page 257, speaks for itself:—

"*Our attention has been called by* MESSRS. SAVORY AND MOORE *to a statement made in a circular recently issued by another firm of chemists, the purport of which would be to deprive them of the priority of invention and manufacture of the medicated gelatine discs now extensively in use for ophthalmic and hypodermic purposes. The fact is on public record, that these ophthalmic discs were first prepared by* MESSRS. SAVORY AND MOORE *in the latter part of* 1863, *when they were extensively employed by* MR. ERNEST HART *in the ophthalmic department of St. Mary's Hospital, as well as in private practice. This settles the question.*"

The Hypodermic Discs were first made by Savory and Moore at the suggestion of Dr. Ernest Sansom in 1874.
